## **DETAILED ACTION**

### ***Information Disclosure Statement***

1. The information disclosure statement filed 03/26/04 has been considered and made of record. A copy of the 1449 initialed, dated and signed by the Examiner is included herewith.

### ***Claim Objections***

2. Claims 1 and 8 are objected to because of the following informalities: the phrase "a oxygen" should be --an oxygen--. Appropriate correction is required.

### ***Priority***

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

### ***Claim Rejections - 35 USC § 102***

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1-15 are rejected under 35 U.S.C. 102(b) as being anticipated by Tamatsuka (USPN 6,413,310).

Tamatsuka teaches silicon annealed wafers wherein the wafers have a COP defect free layer having a thickness of 5 microns and the recited COP defect density (see abstract and examples, for instance). Tamatsuka additionally teaches that the bulk material has a nitrogen concentration as presently claimed (col. 4, lines 7-16, for example). The process limitations recite in the present claims, e.g., claims 4, 5, 7, 8, 11, and 13-15, are not being given patentable

Art Unit: 1775

weight, since applicant is claiming a product and not a process. Applicant has failed to demonstrate that the recited process steps produce a product that is materially different than the applied prior art. In light of the above, it is the Examiner's position that the present claims are anticipated by Tamatsuka.
